Unit of Study	COMP3888
Team name	COMP3888_T15A_Group4
Project Name	Traffic Sign Detection Using TensorFlow
Project start date	Friday, 28/08/2020
Project end date	Friday 27/11/2020
Project point person	Calum Baird (client liaison)
Report Date	09/11/2020

Quick description	Implement both real world and simulated world traffic sign detection algorithms using TensorFlow 2.

Status item	Status up to last week	Planned for next week
Scope	Final (small) modifications to scope of the project are complete, with minor adjustments to simulator tracks discussed.	
Time	We are on track to complete the required deliverables of the project.	
Quality	The tensorflow and simulator deliverables have progressed with improvements to their quality.	
Planned Activities	Creation of track 3 and 4 with reasonable altitudes corresponding to real life. Live testing of tensorflow model. Final assessment deliverables.	Complete final adjustments to Track 3 and 4 simulator tracks. Final assessment deliverables.
Achievements	Completed live testing of tensorflow model Created tracks 3 and 4 with altitude.	
Major deliverables	N/A	Group Report (progress) Individual Report (progress) Demonstration (progress)
Major issues	N/A	N/A
Major risks	N/A	It is important that progress on the final assessments continues at a steady pace.
External dependencies	N/A	N/A
Estimated effort (h)	10-15 hours each	10-15 hours each
Recorded effort (h)	10-15 hours each	
Overall Status (RYG)	G	

*project status report should be brief but informative – may use dot points where appropriate
